REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: None of the prior art of record teaches or suggests a blow mold parison closing apparatus comprising: an attachment block having a cylinder body mount and holder/guide support; a pinch bar spaced apart from the attachment block, the pinch bar having a cylinder piston mount and holder/guide mount; and a holder/guide slidingly supported by the attachment block and coupled to the pinch bar, the holder/guide configured to hold a spring between the pinch bar and attachment block and guide the motion of the pinch bar relative to the attachment block whereby relative motion between the attachment block and pinch bar may be controlled by either a spring or a cylinder each easily interchangeable from said closing apparatus. The prior art also fails to disclose or suggest a method of retrofitting actuators upon a blow mold parison closing apparatus comprising the steps of: detaching a pinch bar from a holder/guide, said holder/guide being slidingly supported by an attachment block; removing a spring from around the holder guide; attaching a cylinder to said attachment block; and reattaching the pinch bar to the holder/guide. The prior art teaches either a spring or cylinder actuating means, but fails to disclose or suggest the pinch bar and attachment block being designed to allow retrofitting between either the spring or cylinder to the other actuating means.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
